

Reinforcement Learning with LunarLander (PPO)

One step in Reinforcement Learning (LunarLander)

How to read this guide: we always show the intuition first, then the formal idea.

What does the LunarLander agent observe?

At each time step, the environment returns an 8-dimensional state vector to the agent.

Index	Variable	Meaning
0	x position	Horizontal position
1	y position	Vertical position
2	x velocity	Horizontal speed
3	y velocity	Vertical speed
4	Angle	Tilt of the lander
5	Angular velocity	Rotation speed
6	Left leg contact	1 if touching ground
7	Right leg contact	1 if touching ground
